Wooden Door Production Factory

VILUCCA

VILUCCA Guarding Life Within

BRAND INTRODUCTION

In the heart of Tuscany, the ancient city of Lucca has stood for centuries, embraced by its enduring stone walls and timeless wooden gates—keeping the world beyond, while preserving peace, art, and the warmth of home within. As the evening light touches the warm wood of its gates, strength and tenderness meet in a feeling that reminds us of one thing: home.

This timeless spirit of protection is where VILUCCA begins.

We create doors that embody the strength of a wall and the warmth of an embrace—not simply as barriers, but as the first welcome home, and a quiet presence in the moments that matter.

From this vision, VILUCCA began a journey of global co-creation.

In Milan, we explore the minimalist philosophy of European architecture and contemporary design. In China, we unite Eastern craftsmanship with precision manufacturing, creating a new expression of aluminum-wood doors.

From this vision, VILUCCA embarked on a journey of cross-border co-creation.

In Milan, Italy, we established an advanced aesthetics research center, drawing inspiration from the minimalist philosophy of European architecture and contemporary design.

In China, we built a global intelligent manufacturing base, where Eastern craftsmanship meets precision manufacturing to shape a new generation of aluminum-wood doors—where strength, warmth, and refined design exist as one.

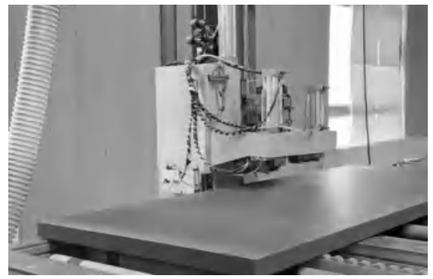

FACTORY WORKSHOP

VILUCCA ’ s global intelligent manufacturing base in China brings together Italian design and Eastern craftsmanship, specializing in the R&D and manufacturing of aluminum-wood doors.

Our factory operates intelligent flexible production lines, covering the entire process from material selection and precision cutting to assembly and testing. We use FSC-certified solid wood and recyclable aerospace-grade aluminum, with innovative aluminum-wood construction and water-based eco-friendly coatings for low-formaldehyde production.

Our European-standard testing laboratory conducts rigorous testing, including 500,000 opening-and-closing cycles, airtightness, and sound insulation. With digital quality traceability and precision manufacturing, we create durable yet warm entrance doors designed to protect the quiet and healthy home.

ALUMINUM WOOD DOOR

Aluminum-wood doors combine the strengths of aluminum and natural wood—a stable structure that resists warping and cracking, durable and easy-to-maintain exterior aluminum, and a warm, refined wood interior.

Dual-color customization with excellent sound insulation, thermal insulation, and sealing performance—durable, sustainable, and built to last.

Versatile for Every Living Space.

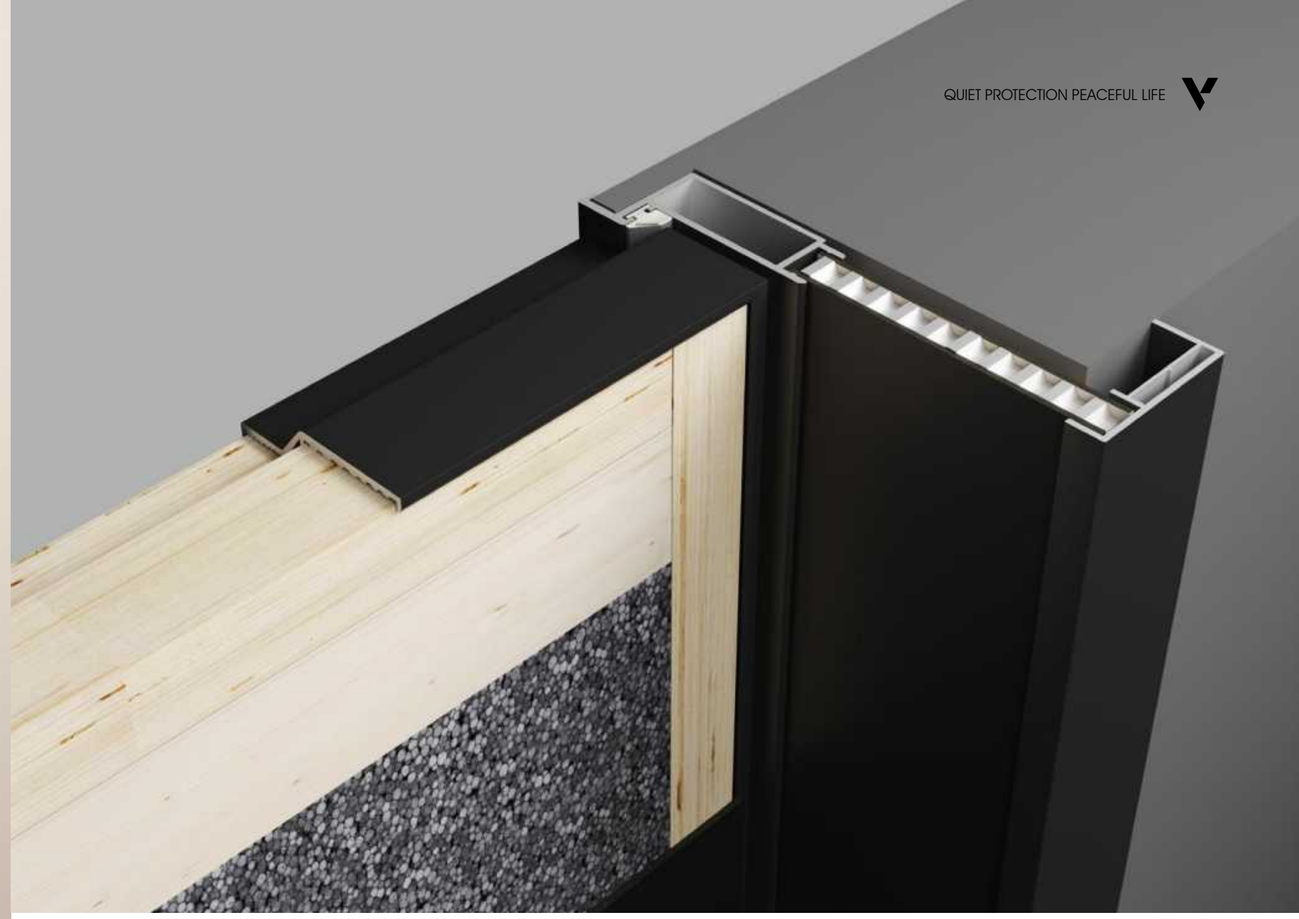

- 200,000-cycle tested for durability and quiet operation.
- Customizable aluminum-wood color matching for a seamless, coordinated interior.

  Aluminum meets wood for structural stability and a warm, refined touch.

Aviation heavyweight quality

It opens and closes stably and is durable

Aerospace-grade quality.
Smooth, stable operation. Built to last.

Combining recyclable aerospace-grade aluminum with natural solid wood, our doors balance structural stability with a warm, refined feel. Clean lines and minimal detailing ensure smooth, stable operation and a comfortable touch. Custom color matching creates a seamless look between the door, aluminum elements, and interior, making it ideal for modern and minimalist homes.

Model No.

VLC-L001

Color: Tan Yan Elm

The door frame is concealed within the wall, creating a seamless, clean look with minimal visual lines. This enhances the sense of space and complements a wide range of interior styles, bringing greater harmony and order to the home.

Model No.

VLC–L001

Color: Painted Door

Finished with eco-friendly water-based paint, featuring low VOCs and a lighter odor for comfortable indoor use. Custom color matching allows seamless coordination with walls for a unified look. Available in matte and soft-touch finishes, with a smooth surface that is easy to maintain and locally repair.

The world is noisy. Home should be quiet. A door separates not only space, but also distractions. What it protects is not just a room, but inner peace. Close the door, and the sounds of wind, rain, and voices become the background. Leave a light on for those returning home late, giving every “good night” a place of comfort and peace.

Black lines reinterpret Eastern elements through a modern lens.
The essence of Neo-Chinese design is not to replicate the past, but to transform cultural symbols such as auspicious clouds, traditional patterns, and latticework into contemporary minimalist language.
Through the balance of wood warmth, light, and refined lines, the space feels elegant, timeless, and rooted in tradition without feeling outdated.

FUNCTIONAL DOOR

The value of a functional door is not simply adding another door, but solving more needs for every space. From hidden doors, barn doors, pocket doors, pivot doors, folding doors, and double folding doors, VILUCCA provides tailored solutions designed for different living scenarios and functional requirements.

Central Pivot Doorr

Features a top-and-bottom central pivot system, allowing smooth rotation with single or double opening options. Ideal for oversized and full-height doors, it offers a clean, modern look without visible side hinges. Compatible with concealed frames and various finishes including water-based paint, PET, and PVC.
Due to the rotation clearance required, sealing, dust protection, and sound insulation are slightly lower than traditional swing doors.

Offset Pivot Door

Features an upper and lower offset pivot system for smooth rotation and flexible sizing.
With concealed hinges and matching finishes, it creates a clean, seamless door-wall design. Suitable for residences, villas, and hotels, including standard and full-height doors.
Due to the pivot structure, sealing, dust protection, and sound insulation are slightly lower than traditional swing doors.

Sliding Door

Moves smoothly along the track without requiring swing space, maximizing space efficiency for kitchens, balconies, bathrooms, and walk-in closets.
Equipped with silent soft-close rollers and anti-jump protection, it ensures smooth, safe, and stable operation.
A sliding door brings more openness, natural light, and a sense of spaciousness to the home.

Pocket Door

Features a concealed in-wall sliding system that allows the door panel to fully disappear into the wall cavity, saving space and creating a more open, seamless look.

Ideal for compact spaces such as bathrooms, walk-in closets, and hallways, with various finishes available and optional soft-close systems for smoother, quieter operation.

As the track is concealed inside the wall , early planning and proper wall preparation are required during the renovation stage.

Folding Door

Connected by specialized hinges, the multi-panel design folds neatly to one side when opened, maximizing space and creating a wider opening for balconies, large areas, and wide doorways.

Supports multi-panel customization with concealed frames and various finishes, including water-based paint, PVC, and PET, for seamless integration with interior styles.

Specialized folding hinges ensure smooth operation, but due to multiple joints and panel gaps, sealing, sound insulation, and dust resistance are generally lower than traditional swing doors.

Double Folding Door

Features a large and small panel combination, allowing daily access through the main panel and wider openings when both panels fold together.
Supports concealed frames and finishes such as water-based paint and PET for a seamless interior style. Due to multiple hinges and panel joints, sealing, sound insulation, and dust resistance are relatively limited compared with traditional swing doors.

Ghost Door

Features a concealed top track with no floor rail, keeping the floor seamless, reducing dust accumulation, and improving accessibility and cleaning convenience.

When closed, the door blends seamlessly into the wall for a clean look; when opened, it slides smoothly along the concealed top track, ideal for corridors and compact spaces with soft-close operation for quiet movement.

Requires high wall flatness and vertical accuracy to ensure optimal appearance and performance.

Barn Door

·Features an external top-hung sliding system with a simple installation and distinctive rustic, industrial style.
·Available with water-based paint, PVC, and PET finishes. Soft-close options provide smooth and quiet operation.
·Due to the gap between the door and wall, sealing and sound insulation are limited, making it ideal for closets and storage spaces.

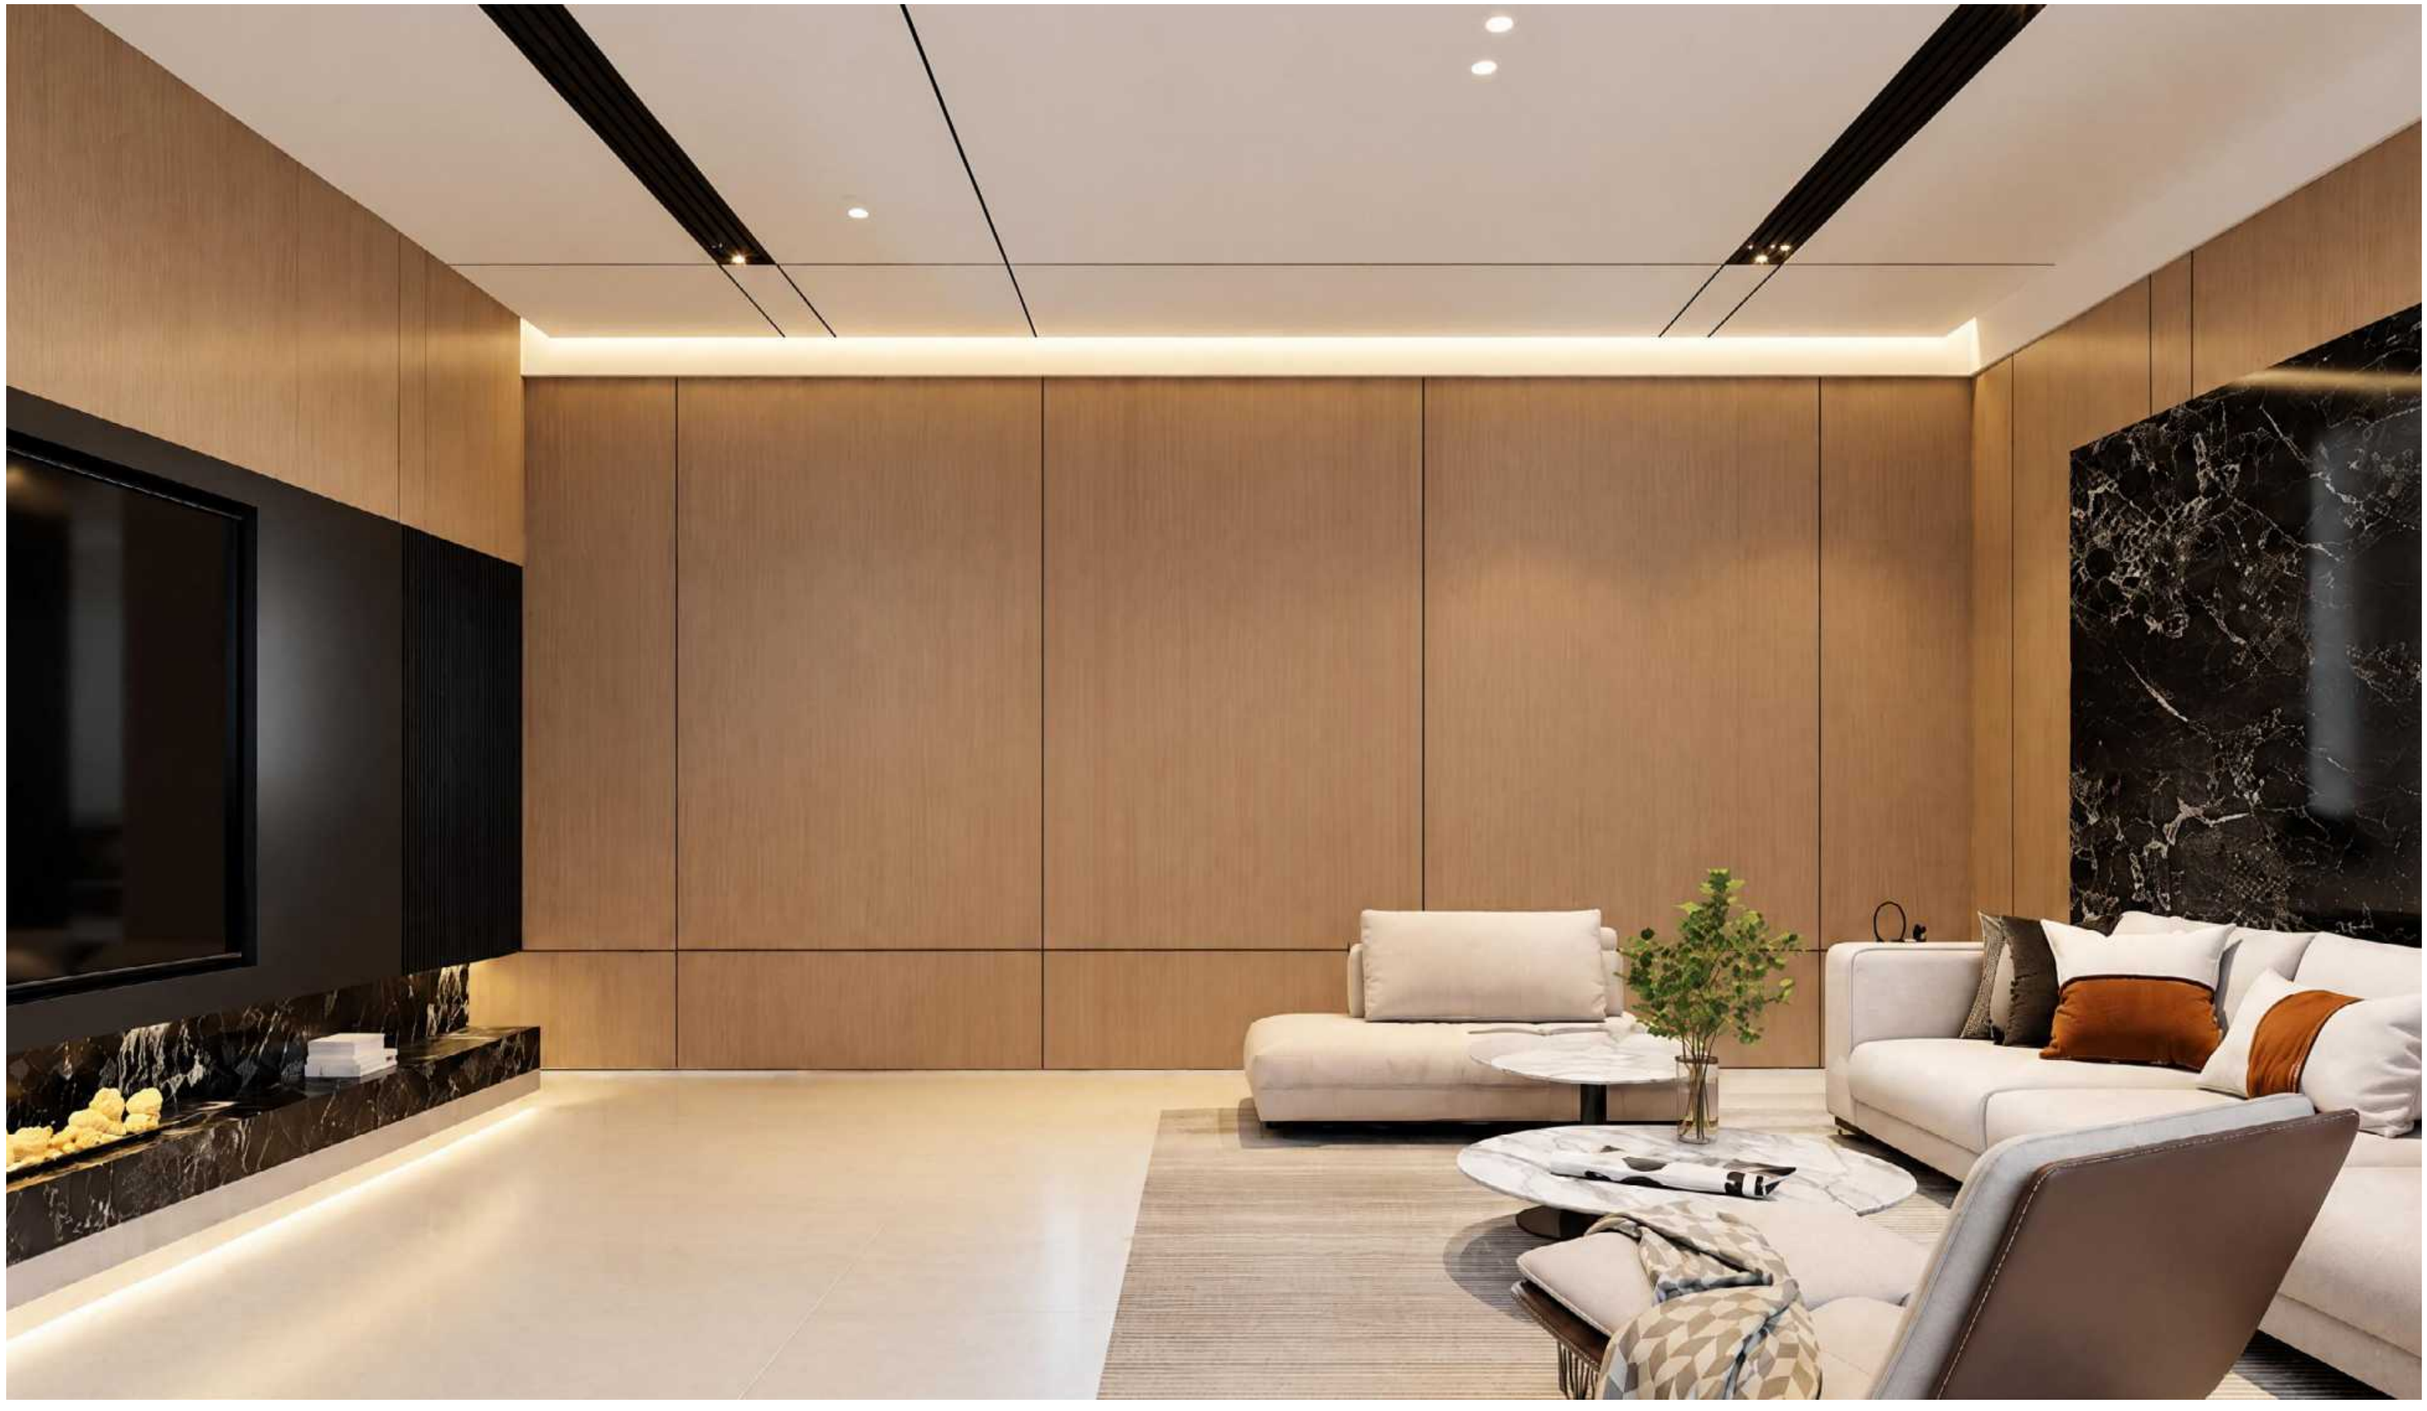

PARTITION WALL

Solve Rigid Spaces
No need to build walls. A single panel creates flexible zones for the entryway, dining area, and living space.

Create a Seamless
HomeWall panels extend throughout the space, hiding doors and creating clean, unified lines.

Protect Your Walls
Wall panels add durability, making surfaces easy to clean and resistant to daily wear.

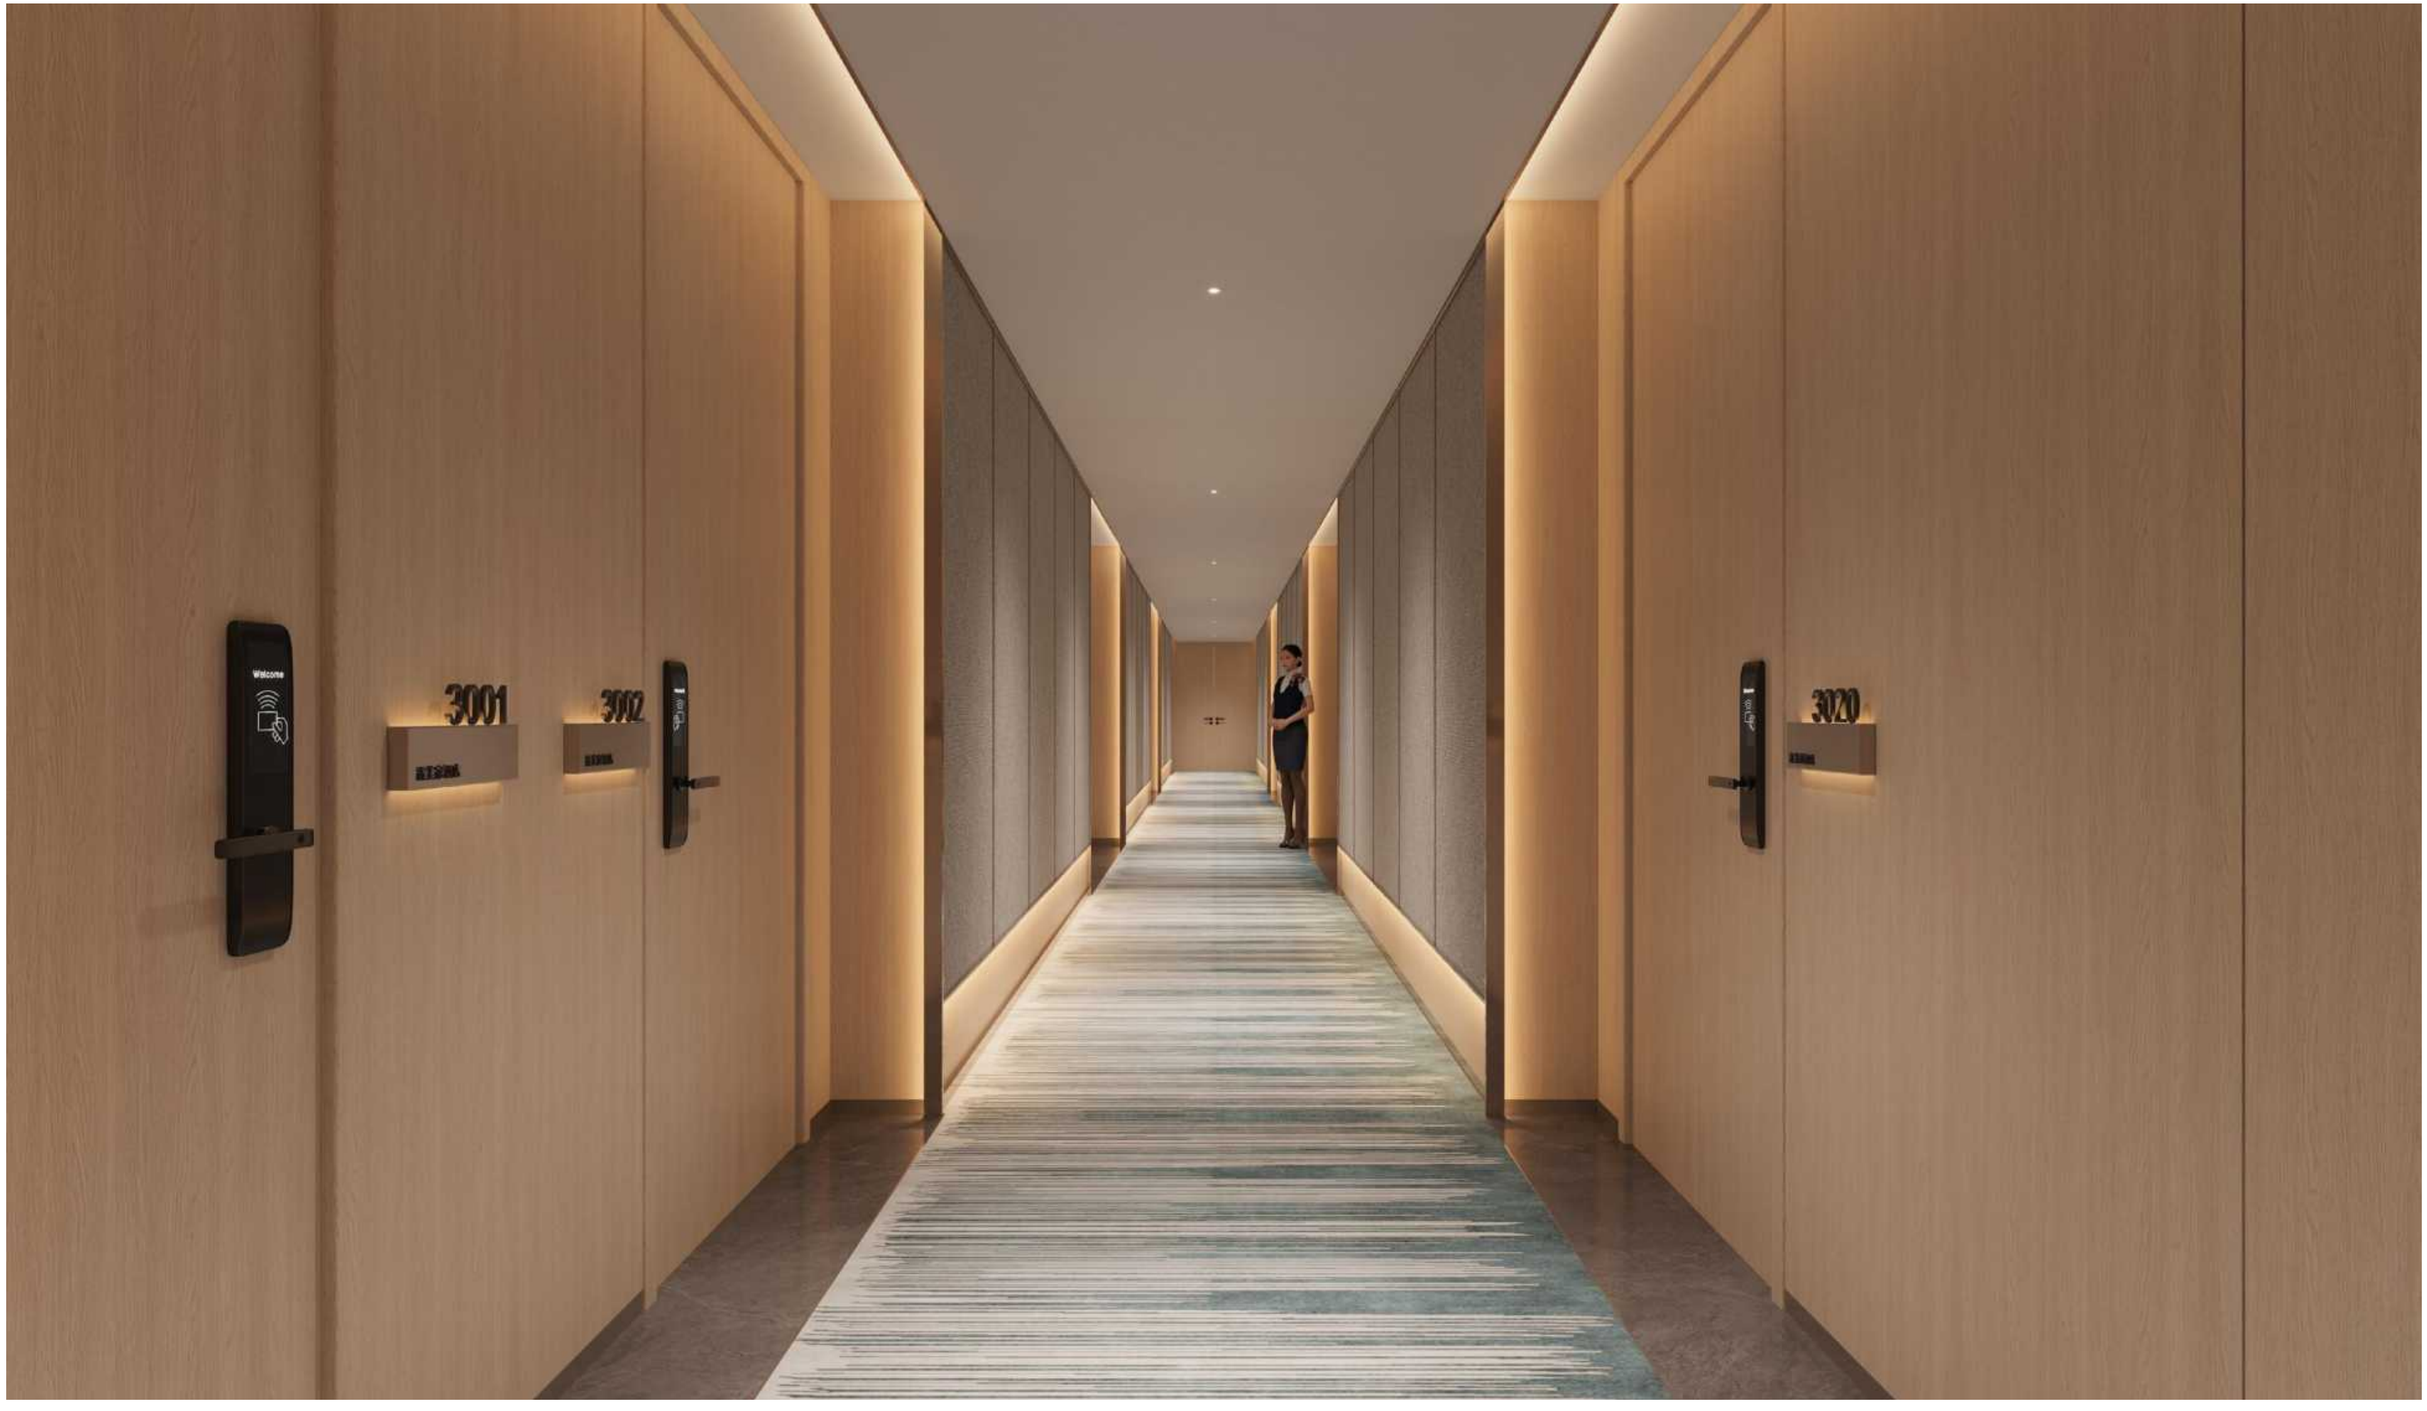

ENGINEERING DOOR

Integrated Engineering Door Solutions

Designed for hotels, offices, and commercial projects, offering performance in sound insulation, durability, fire safety, environmental protection, and visual consistency.
Supports custom sizes, designs, colors, and finishes to match various interior styles.
Providing full-service solutions from site measurement, design development, mass production, standardized installation, and after-sales support.
